

Geometry - Composite Transformations

Name: _____

Now we are going to explore if the order in which you do multiple transformations matters.

a) Translate $\triangle ALT$ if $A(-5,-1)$, $L(-3,-2)$, $T(-3,2)$ by the rule $(x, y) \rightarrow (x + 3, y + 2)$, then reflect the image over the y-axis.

- $A'(-2, 1)$
- $L'(-1, 0)$
- $T'(0, 4)$
- $A''(2, 1)$
- $L''(1, 0)$
- $T''(0, 4)$

b) Reflect $\triangle ALT$ if $A(-5,-1)$, $L(-3,-2)$, $T(-3,2)$ over the y-axis, then translate the image by the rule $(x, y) \rightarrow (x + 3, y + 2)$.

- $A'(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $L'(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $T'(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $A''(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $L''(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $T''(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$

Did the order you did the transformations change the final image? _____

So, does order matter? _____

What about with rotations and reflections? (Think about)

c) Rotate $\triangle TAB$ if $T(2,3)$, $A(1,1)$, $B(4,-3)$ 90° clockwise about the origin, then reflect the image over the line x-axis.

- $T'(3, -2)$
- $A'(1, -1)$
- $B'(-3, -4)$
- $T''(3, 2)$
- $A''(1, 1)$
- $B''(-3, 4)$

d) Reflect $\triangle TAB$ if $T(2,3)$, $A(1,1)$, and $B(4,-3)$ over the x-axis, then rotate the image 90° clockwise about the origin.

- $T'(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $A'(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $B'(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $T''(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $A''(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$
- $B''(\underline{\hspace{1cm}}, \underline{\hspace{1cm}})$

Did the order you did the transformations change the final image? _____
