

Lines, Segments, and Rays

Draw the diagram that goes with each geometric term below, and then write a definition.

Angle		Two rays with a common endpoint
Diagonal line segment		
Horizontal line segment		
Intersecting line segments		
Line		An infinite set of points forming a straight path that extends in two directions
Line segment		A part of a line with 2 endpoints
Parallel		
Perpendicular		
Point		An exact location indicated with a dot.
Ray		
Skew		
Vertex (Vertices is plural)		The point that two segments or rays intersect.
Vertical line segment		

Angles

Angles are made up of two rays with a common endpoint, called the vertex. Rays are named starting with the endpoint and then another point on the ray. Ray \overrightarrow{BA} and ray \overrightarrow{BC} share a common endpoint (B). Notice that both rays are named starting with B.

Point B is called the:

Vertex

The sides of the angle are:

\overrightarrow{BA} and \overrightarrow{BC}

Angles are usually named by three capital letters. The middle letter names the Vertex. If only one angle is located at a vertex, then the angle can be named using the vertex letter alone. And if there is a lower case letter between the two sides, the angle can also be referred to using the lower case letter.

The angle above can be named: $\angle B$ $\angle ABC$ $\angle CBA$ $\angle x$

ANGLE MEASURES A protractor is used to measure angles. The protractor is divided evenly into a half circle of 180 degrees (180°). When the middle of the bottom of the protractor is placed on the vertex, and one of the rays of the angle is lined up with 0° , the other ray of the angle crosses the protractor at the measure of the angle. The angle below has the ray pointing left lined up with 0° (the outside numbers), and the other ray of the angle crossed the protractor at 55° .

Types of Angles

Type acute
Measure less than 90°

Type right
Measure 90°

Type obtuse
Measure greater than 90°

Type straight
Measure 180°

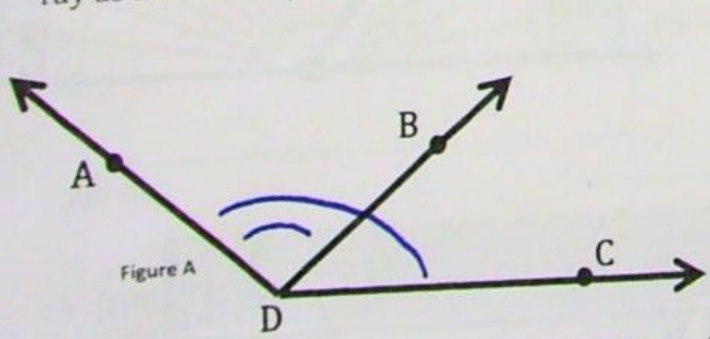

using the protractor below, find the measure of the following angles. Then, tell what type of angle it is using the information above.

#	Question	Measure	Type of Angle
1	What is the measure of $\angle ARF$?	180°	straight
2	What is the measure of $\angle CRF$?	120°	obtuse
3	What is the measure of $\angle DRF$?	65°	acute
4	What is the measure of $\angle ARD$?	115°	obtuse

Adjacent Angles

Adjacent Angles - Adjacent angles are two angles that have the same vertex and share one ray as a side. They do not share space inside the angles.

A) $\angle ADB$ is adjacent to $\angle BDC$.

However, $\angle ADB$ is not adjacent to $\angle ADC$ because adjacent angles *do not* share any space inside the angle.

B) These two angles are not adjacent. They share a common ray but do not share the same vertex.

C) $\angle NOT$ is not adjacent to $\angle SOM$. They share space inside the angles. (overlap)

For each diagram below, name the angle that is adjacent to it.

1) $\angle CDB$ is adjacent to \angle ADB

2) $\angle TUV$ is adjacent to \angle VUZ

3) $\angle SRP$ is adjacent to \angle PRT

4) $\angle PQR$ is adjacent to \angle RQJ

Independent Practice

Part 1: Circle the correct choice for each question.

- Which of the following is not a point on \overleftrightarrow{AC} ?
 Y B R D V A
- Which of the following is not a correct name for this line?
 A \overleftrightarrow{PQ} L \overleftrightarrow{QP} G \overleftrightarrow{PQ}
- Which of the following is not the name of a segment in this figure?
 O \overline{RS} T \overleftrightarrow{ST} H \overline{TR}
- Which of the following is not the name of a ray in this figure?
 W \overrightarrow{EG} S \overrightarrow{FG} U \overrightarrow{FE}
- Which of the following is not a correct name for this angle?
 I $\angle ACB$ Y $\angle CBA$ L $\angle B$
- Which of the following is not the name of a line in this figure?
 G \overleftrightarrow{ZX} R \overleftrightarrow{XY} K \overleftrightarrow{YZ}
- Which of the following is a segment that has B as an endpoint?
 N \overline{CD} C \overline{AC} T \overline{CB}
- Which of the following is *not* the name of a ray in this figure?
 H \overrightarrow{MO} S \overrightarrow{LM} P \overrightarrow{KO}
- Which of the following is not a correct name for an angle in this figure?
 M $\angle H$ A $\angle GHF$ D $\angle EHG$
